

FINALLY, GET DLP TO ACTUALLY WORK!

Your Company's Data is Complex; Knowing What to Protect Doesn't Have to Be.

Once your data is well known, your existing data protection controls can be optimized to prevent your next breach. The Nx Platform makes it simple by providing a complete inventory of all your data so you know what critical data you have, where its located and if its at risk.

PREVENTING YOUR NEXT BREACH

You rely upon DLP/CASB, need-to-know access, and insider threat controls to prevent breaches, but they continue to happen. Why? These controls are only as good as their rules. Nx delivers the missing business insights you need to define the right rules to fix false alarms, contain critical data and finally have confidence that DLP is working.

Nx not only tells you what critical data you have, where it's stored, who has access and if it is being protected— it also helps orchestrate how to best remediate data that is at risk. You can now optimize your controls so that they only respond to real risks and do it with less resources and in shorter time.

One of our top priorities is complete data protection. With Nx, we're able to better protect our "crown jewels" and know if it's at risk before we lose control.

- EVP of Technology, Leading Telematics Company

KEY BENEFITS

Identify At Risk Data

See risk indicators before the breach happens

Collaborate with Business to Define Blocking Rules

Team with data owners to capture critical data attributes and authorized data flows to avoid business disruptions

Reduce False Alerts

Optimize effectiveness of DLP/CASB, need-to-know access, and insider threat controls

Contain Critical Data

Once data protection controls have the right rules, these controls actually work

Continuous Compliance

Proactively monitor data risks to respond with confidence

FIND YOUR JEWELS

Nx connects to and analyzes all of your enterprise data, scouring databases, silos, and cloud services. Nx's unique data analytics and capabilities empower teams to work together to rapidly separate the jewels from the junk.

OPTIMIZE YOUR CONTROL

You've already invested in these controls, but you know they are not reducing risks. By leveraging new business insights, Nx finally enables you to reliably configure DLP rules for controlling data without disrupting business operations.

REMAIN CONFIDENT

Data and cyber risks change every minute, so your rules need to remain current. Nx delivers continuous monitoring of your data and its controls effectiveness so the rule can be tuned as needed.

CONFIRM DATA PROTECTION CONTROLS EFFECTIVENESS

Nx Platform fuses business data with cyber controls to provide a complete and accurate view of your critical data and its controls effectiveness through interactive dashboards with drill down analysis.

ORCHESTRATE CONTROLS FOR TIMELY REMEDIATION PLANS

Nx compares actual configurations and user practices against policies & standards to identify controls or user behavioral anomalies, risk levels and ownership.

DETECT DATA RISK INDICATORS IN ADVANCE OF A BREACH

As high data risk incidents are detected and confirmed, Nx's workflow automation assists in coordinating efficient risk remediation.

CONTINUOUS COMPLIANCE MONITORING & ALERTS

Nx's continuous monitoring, alerts and business rule tuning capabilities enable you to proactively manage data risk and compliance.

We've had DLP for years but could never get the rules right to ever put into blocking mode. With Nx, we were able to work with the physicians and administrators to reliably contain critical data for the first time ever! The product vendors couldn't get their own controls to work this well...

- Hospital CISO

Nx fuses business data analytics and cyber intel to empower you to gain control of your critical data and optimize the effectiveness of your data protection controls. We provide you the cyber intel needed to be a proactive data defender and prevent your next breach.
